

# Get creative with Darwin's Theory Of Evolution : make a 3D model of the Galapagos islands

- Draw or print a map of the Galapagos islands (A4 to A3 is ideal); use this as the base for your model;
- Decide which material you are going to use to construct your 3D model – papier mache, Lego, salt dough (if you have spare flour), cardboard or maybe plasticine ( see below for ideas);
- Build up each island on your map - you will need to find out which are volcanic, where there is high land and low lying land and build up your map appropriately - a **topographical** map will help you here;
- Decorate as required;
- Find out what type of finch lived on each island;
- Make little flags, perhaps with cocktail sticks /straw and paper and write on each flag the name of the island, the type of finch that evolved there and why it evolved the way it did;
- Email your photos to finchparents for the classroom showcase page.
