

# Science Vocabulary

## Rocks and Soil

### Across

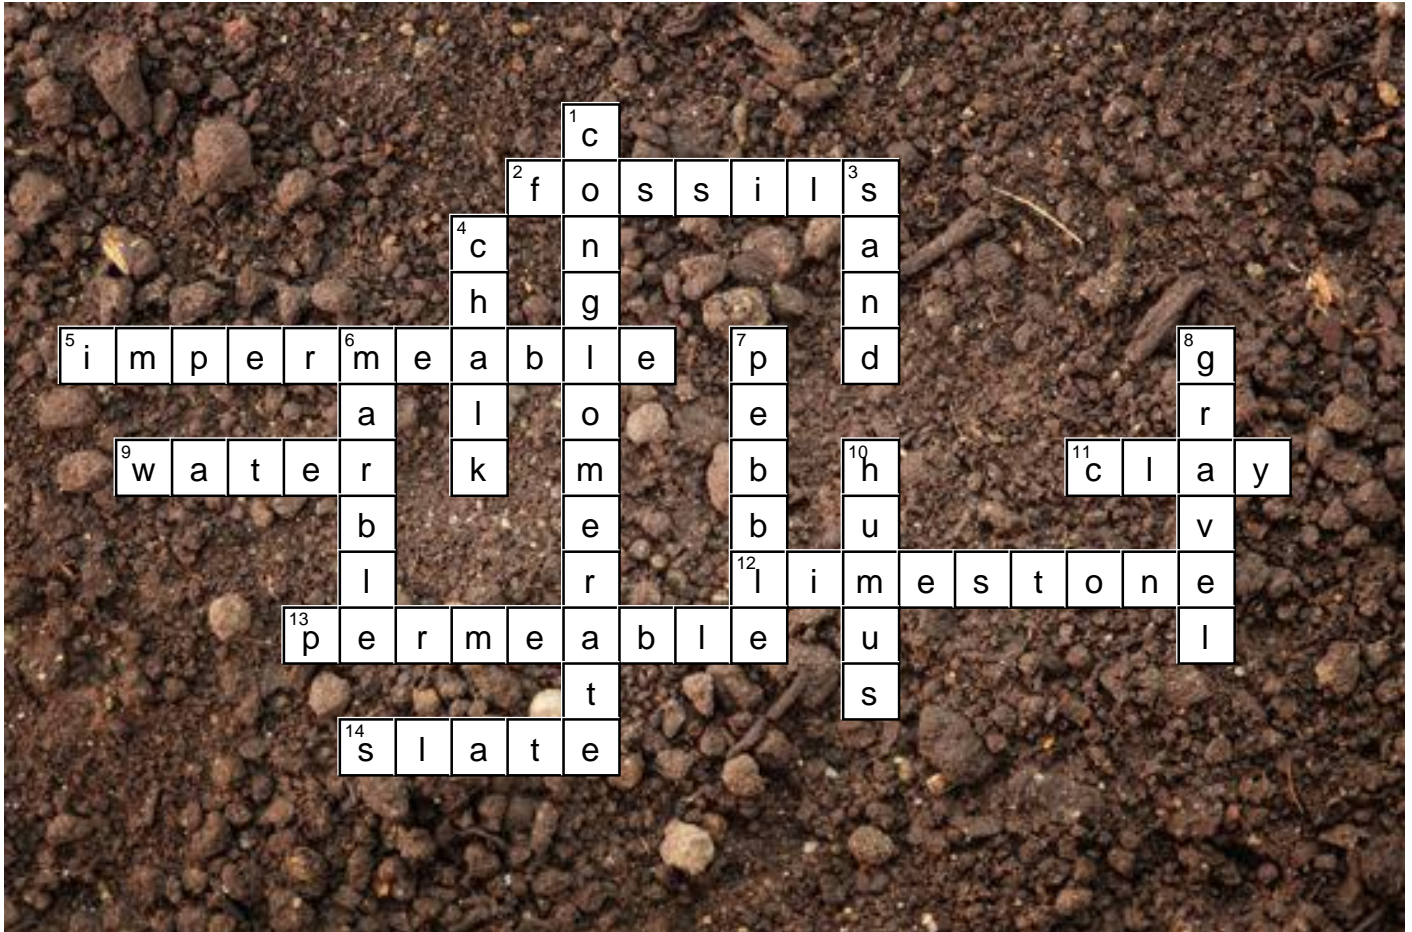

2. The remains (or shape) of plants or animals that died a long time ago.
5. Rocks that do not let water soak through them.
9. Soil is usually made from humus, worn down rock, air and...
11. Moist, sticky soil that is used for making bricks and pottery.
12. A rock formed from shells and animal remains (used in building).
13. Rocks that do let water soak through them.
14. A hard, impermeable rock used for roof tiles.

### Down

1. A type of rock that is a mixture of different rocks.
3. Tiny, loose grains of rock found on the beach and in the desert.
4. A soft white limestone that is formed from the skeletons of tiny sea animals.
6. This rock is used to make floor and wall tiles (and sometimes statues too).
7. Small rocks that have rubbed against each other and become smoother.
8. A loose mixture of small stones and pebbles.
10. Dead and rotting material from plants and animals.

# Science Vocabulary

## Rocks and Soil

### Across

2. The remains (or shape) of plants or animals that died a long time ago. [fossils]
5. Rocks that do not let water soak through them. [impermeable]
9. Soil is usually made from humus, worn down rock, air and... [water]
11. Moist, sticky soil that is used for making bricks and pottery. [clay]
12. A rock formed from shells and animal remains (used in building). [limestone]
13. Rocks that do let water soak through them. [permeable]
14. A hard, impermeable rock used for roof tiles. [slate]

### Down

1. A type of rock that is a mixture of different rocks. [conglomerate]
3. Tiny, loose grains of rock found on the beach and in the desert. [sand]
4. A soft white limestone that is formed from the skeletons of tiny sea animals. [chalk]
6. This rock is used to make floor and wall tiles (and sometimes statues too). [marble]
7. Small rocks that have rubbed against each other and become smoother. [pebble]
8. A loose mixture of small stones and pebbles. [gravel]
10. Dead and rotting material from plants and animals. [humus]
